

Global Climate Change

The Pragmatic Guide To Moving the Needle

Ivo Welch and Bradford Cornell

Copyright Ivo Welch, Brad Cornell, 2022.

This book was typeset in Lua^AT_EX.

Primary Font: Charter, 11pt.

Highlight Fonts: LMSans, Helvetica.

Primary Source of Cartoons: cartoonstock.com.

Primary Graphics Generator: [R Language](#).

Front Cover Design: [Midul Hasan](#) and Ivo Welch.

This book is accompanied by a free online version at <https://climate-change.world>, which has [hyperlinked](#) references (merely underlined in the printed version) and fully colorized graphs.

Contents

	The Physical Problem	1
1	Humanity	3
1	Capitalism and Population	4
2	The Population Explosion	5
3	Regional Population Variation	8
4	Rich and Poor: OECD and non-OECD	9
5	Population Taboos	11
6	What Now?	12
7	We Are Most of The Problem	14
2	Energy	17
1	How To Measure Power and Energy	18
2	Where Does All Our Energy Go?	26
3	Rich and Poor Today	28
4	The Future	32
5	Clean and Dirty Energy	38
6	Important Details and Clarifications	43
7	The Situation Today	45
3	Greenhouse Gases	49
1	Measuring Human Emissions	50
2	Earth's Natural Carbon Cycle	58
3	Accumulating Human Emissions	61
4	The Balance Sheet	65
5	Growth in Human CO ₂ Emissions	68
6	Energy and Emissions	72
7	The Kaya Components	77
8	Reducing the World's Emissions	86

4	Climate Science	91
1	Climate Versus Weather	92
2	The Global Thermostat	98
3	The Temperature Record	101
4	Greenhouse Gases and Temperature	113
5	Scientific Agreement and Disagreement	116
6	Were the Models Wrong in the Past?	124
5	A Warmer Future	131
1	The Expected Warming Path	133
2	The Expected Warming Harm	138
3	Inevitable Change and Associated Harm	145
4	Temperature Change Summary	148
5	The Well-Known Unknowns	150
6	The Less-Known Unknowns	151
7	Appropriate Perspectives	157
8	Planetary Roulette, Anyone?	161
	The Social Problem	165
6	A Crash Course in Economics	167
1	Human Self-Interest and Free Riding	168
2	The Tragedy of the Commons	171
3	When Should Governments Intervene?	174
4	Practical Problems of Pollution Taxes	183
5	Margins, Costs, and Scale	187
6	The Economics of Innovation	192
7	Moving the Needle Now	195
7	Modeling The World Economic Impact	197
1	An Economic Sketch of Earth	198
2	What Goes In and What Comes Out?	200
3	What is the Scientific Consensus?	205
4	CO ₂ Taxes and Consumption Losses	207
5	What are the Best Model Parameters?	210
6	What Else Should Be in the Model?	216
7	What Have We Learned from IAMs?	218

8	The Wrong Questions	223
1	Problems, Choices, and Outcomes	224
2	Can We Go It Alone?	226
9	Unrealistic Approaches	235
1	Why It's So Difficult	237
2	Why A Global CO ₂ Tax is Unrealistic	239
3	Why Climate Treaties are Unrealistic	243
4	Why Corporate Solutions are Unrealistic	253
5	Why Divestment Makes No Sense	255
6	Why Individual Solutions Are Doomed	257
7	Is Climate Change About Social Justice?	265
10	Realistic Approaches	273
1	Basic Requirements for Success	274
2	Enact Local Fossil-Fuel Taxes!	276
3	Promote Technological Change!	284
4	Recommendable Activism	287
	The Technology Problem	291
11	Leaving Fossil Fuels	293
1	Ongoing Growth	294
2	Fossil Fuel Advantages	294
3	Hydrogen	296
4	Nuclear Power	298
5	Batteries	304
6	How To Read Technology Forecasts	305
7	The Politics of Defending Fossil Fuels	307
8	The War on Climate-Change	312

12	Electricity	317
1	Why Electricity?	317
2	Not All Electricity Is the Same	319
3	Basic Electricity Provision	320
4	Base, Intermittent, Dispatch Power	325
5	Technologies For Generation	327
6	Tech for Storing Electric Energy	336
7	Transmitting Electricity	347
8	Earth's Economic Energy Problem	350
9	The Business Perspective	354
10	The Role of The Market	356
11	Current Power Plans and Forecasts	359
12	Reliability	362
13	Beyond Electrification	369
1	Hydrogen	370
2	Industrial Heat	375
3	Agriculture	377
4	More Methane Problems	384
5	Construction and Efficiency	389
14	Remediation and Geoengineering	393
1	The Social Cost of CO ₂ (Yet Again)	395
2	CO ₂ Removal	397
3	Solar Radiation Management	405
	The Transitioning Problem	411
15	Making It Happen	413
1	What Can Countries Do?	415
2	What Can Individuals Do?	436
App. A	Some Exciting Green Tech	444
App. B	Recommendations By Others	445
	Appendix	451
	Crib Sheet — Summary of Facts	453

THANKS

Many people have helped us with advice on subjects that we have struggled with. This does not necessarily mean that they endorsed our final perspectives. We want to thank especially the following:

David Archer, University of Chicago
John Cochrane, Stanford University
Andrew Dessler, Texas A&M University
Maynard Holt, Tudor, Pickering, Holt & Co.
Peter Keller, Berkeley Research Group
Steven E. Koonin, New York University
Ronald K. Linde, California Institute of Technology
Bjørn Lomborg, Copenhagen Institute
Michael E. Mann, Pennsylvania State University
William D. Nordhaus, Yale University
Edward A. Parson, UCLA
Paul Sztorc, formerly Yale University
Nicholas Stern, London School of Economics
Daniel Swain, UCLA
Jan Veizer, University of Ottawa
Griffin M. and Julian S., UCLA
Kelly Yang, UCLA

SPECIAL CALLOUT

It may be a bit unusual, but our editor Mary Clare McEwing did such a superb job on helping us with the first edition of this book that she deserves a special callout. Thanks, Mary Clare — we could not have written this book without you!
